(54) FACSIMILE EQUIPMENT

(57)Abstract:

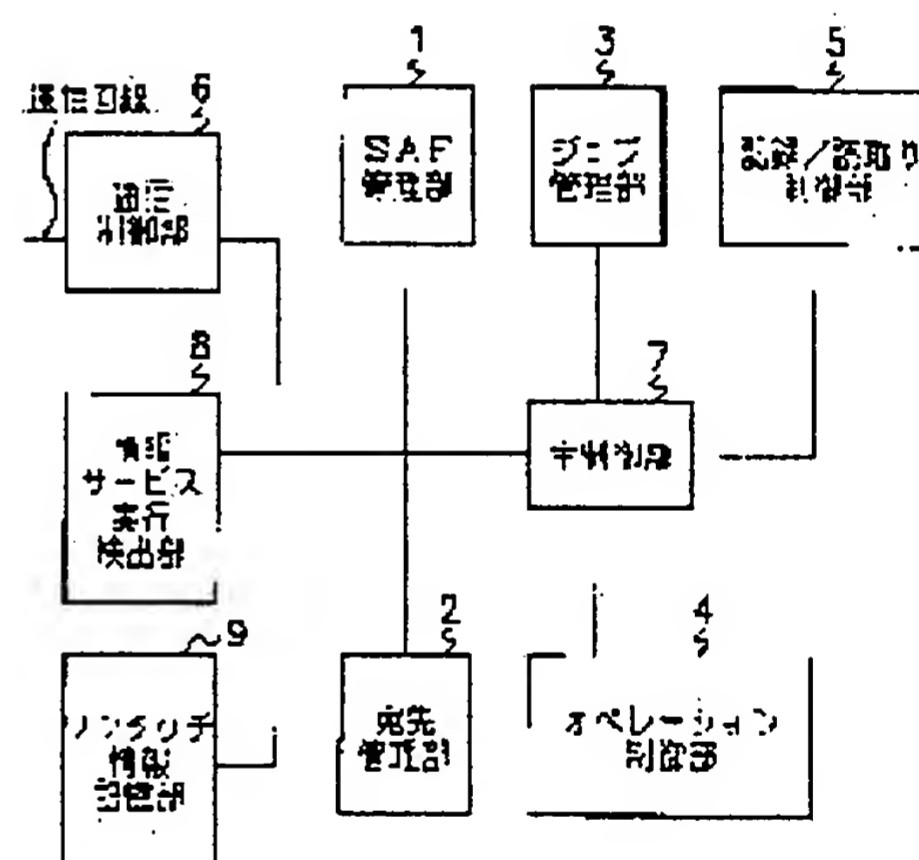

PROBLEM TO BE SOLVED: To obtain facsimile equipment, which can respectively register a connection procedure to facsimile information service for every operation information, also easily receives information service and makes facsimile work of a user efficient.

SOLUTION: An SAF managing part 1 manages a memory/HDD, etc., which stores image information data (transmitting original/received original) that should be subjected to FAX transmission and reception, and a destination managing part 2 manages the telephone number of an opposite party to which transmission should be made. A job managing part 3 starts to transmit a transmitting original stored in the part 1, starts a

receiving operation to prepare one reception job when

an incoming call is received and performs the control, etc., of a reception job, such as to start printing a received original on recording paper, on the basis of the prepared reception job.

According to this configuration, it is possible to detect a response from the opposite party and register whether a service number should be made to flow onto a line in each of a single touch of button operation information.
